

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Currently Amended) A method for searching for a folder in a menu of a wireless device, comprising:

receiving, at a remote server, one or more search parameters from the wireless device, the one or more parameters different from a menu navigation command of the wireless device, wherein the remote server comprises a script processor configured to provide further search parameters based on responses to one or more queries displayed on the wireless device, the one or more queries being displayed upon the activation of a script;

identifying a folder based on the one or more search parameters and any further search parameters provided by the script processor, wherein the identified folder is part of a preexisting deck maintained by said remote server; and

communicating the identified folder to said wireless device for performing a menu navigation to the identified folder.

2. (Currently Amended) The method of claim 1, ~~further comprising:~~

~~activating a script directed to one or more queries, wherein the script is associated with a~~ navigation command, each of the one or more queries associated with the one or more search parameters.

3. (Canceled)

4. (Previously Presented) The method of claim 2, wherein the script further includes one or more operations that performs one of facilitating a purchase based on the one or more queries, facilitating a reservation based on the query and placing a phone call based on the query.

5. (Currently Amended) A method for searching for a folder or an item in a menu of a wireless device, comprising:

receiving, at a remote server, one or more search parameters from the wireless device, the one or more parameters different from a menu navigation command of the wireless device, wherein the remote server comprises a script processor configured to provide further search parameters based on responses to one or more queries displayed on the wireless device, the one or more queries being displayed upon the activation of a script;

identifying a selection of a plurality of folders and/or a plurality of items based on the one or more search parameters and any further search parameters provided by the script processor, each of the plurality of folders and items being part of a preexisting deck maintained by said remote server;

communicating a second menu to the wireless device based on the identified selection operation.

6. (Previously Presented) The method of claim 5, wherein the second menu is a flat menu that includes two or more identified items.

7. (Previously Presented) The method of claim 6, wherein the second menu includes at least one text message that contains at least one of the one or more search parameters.

8. (Currently Amended) The method of claim 6, ~~further comprising activating a script directed to one or more queries, wherein~~ the script is associated with a navigation command, each of the one or more queries associated with the one or more search parameters.

9. (Previously Presented) The method of claim 5, wherein the second menu is a hierarchical menu that includes two or more identified folders.

10. (Currently Amended) A device for searching for a folder or item in a menu of a wireless device, comprising:

an interface at a remote server that receives one or more search parameters from the wireless device, the one or more parameters different from a menu navigation command of the wireless device, wherein the remote server comprises a script processor configured to provide further search parameters to the interface based on responses to one or more queries displayed on the wireless device, the one or more queries being displayed upon the activation of a script;

a search device that performs a search operation based on the one or more search parameters and any further search parameters provided by the script processor, the search operation identifying at least one folder and/or at least one item, the at least one folder and at least one item each being part of a preexisting deck maintained by said remote server and communicated to the wireless device; and

a managing device that provides information to the wireless device based on the search operation;

wherein one of the at least one identified folder and/or the at least one identified item or a portion of a second menu is provided for display on the wireless device, and wherein the second menu is formed based on the provided information.

11. (Currently Amended) The device of claim 10, wherein the wireless device displays the at least one identified folder and/or the at least one identified item.

12. (Previously Presented) The device of claim 10, wherein the wireless device displays a portion of the second menu.

13. (Previously Presented) The device of claim 12, wherein the second menu is a flat menu that includes two or more identified items.

14. (Previously Presented) The device of claim 12, wherein the second menu is a hierarchical menu that includes two or more identified folders.

15. (Original) The device of claim 12, wherein the second menu includes at least one text message that contains at least one of the one or more search parameters.

16. (Canceled)

17. (Currently Amended) A device of claim ~~16~~10, wherein the script processor accesses information relating to an external network in response to the script.
